UK AD & WORLD BIOGAS EXPO 2018 – STAND D601

DMT hits landmark production of ¼ billion cubic metres of green gas

Global biogas upgrading equipment specialist DMT Environmental Technology will reveal at UK AD and World Biogas Expo 2018 how its membrane technology has produced a quarter of a billion cubic metres of biomethane, which is enough green gas to heat 227,000 homes and power thousands of vehicles worldwide. Furthermore, the firm will announce the introduction of its first UK-based sales and service team. The new team will roll-out DMT's highly successful collaborative based project service to UK customers and help new developers easily access DMT's superior yield-generating upgrading technology.

Visitors to stand D601 will learn how 30 international plant operators, including the UK's first commercial biomethane to grid facility which opened in 2012 at Poundbury, have benefited from DMT's Carborex® MS membrane technology: housed in a compact, modular, containerised unit, it boasts an uptime of 98 per cent and upgrades biogas to a methane concentration of 99 per cent, resulting in a higher yield.

Heading up the new team, UK Business Director Stephen McCulloch proudly adds: "Converting organic matter into renewable gas also brings considerable carbon savings – focusing on efficiency and effectiveness, DMT's worldwide projects have achieved savings in excess of 642,382 tonnes CO₂ equivalent, equal to 0.14 per cent of the UK's total greenhouse gas emissions. This is the same as taking 20 per cent of all buses in the UK off the road, or all fishing vessels in the UK off the seas and oceans."

Commenting on the commitment DMT is showing to the UK AD industry, Charlotte Morton, Chief Executive of ADBA and one of the organisers of UK AD and World Biogas Expo 2018, said: "The new Renewable Heat Incentive tariffs are set to kickstart the second wave of biomethane plants in the UK. Having grown from 0 to 90 plants in the last five years, we expect this figure to grow further over the next few years, and it's great to see DMT placing themselves at the heart of the UK's biomethane sector."

Stephen outlines his plans for the UK team: "As well as expanding the UK market, we will be increasing the scope of our supply, including offering finance options. In addition, we have fine-tuned our offering and are issuing a five-year membrane guarantee on our Carborex® MS upgrading technology. With this improved strategy we look forward to helping to take the already thriving UK biomethane sector to the next level – and to producing our next quarter of a billion cubic metres of green gas."

SHOW PREVIEW

UK AD and World Biogas Expo 2018 takes place 11-12 July 2018, NEC Birmingham, and is the world's biggest gathering of biogas professionals.

About DMT Environmental Technology

DMT Environmental Technology is the market leader in biogas upgrading with membrane technology and innovations for desulphurization, water treatment and resource recovery - these technologies and products help companies to make a contribution to the environment in a profitable way. A reliable partner with 30 years' experience, DMT-ET was the first to build a commercial upgrading plant in Europe. In 2016 we sold the biggest upgrading plant in the world, acquired a company to add resource recovery technology to our products and developed the Sulfurex BR for better desulphurization. DMT-ET has offices in Europe, the United States, Canada and Asia.
